## What is Warehousing?

Warehousing is the procedure of storing goods to be distributed or sold. Often used by manufacturers, import/exporters, wholesalers, transport businesses etc.

## What We Offer

The Label Centre provides professional warehouse labelling to the UK's warehousing industry, supplying products that include high quality solutions for barcode labelling and warehouse identification.

## Material

1. Polyester
2. PVC
3. Mark Resist PVC
4. Kapton
5. Ultra-Destruct & Tamper Evident
6. Aluminium
7. Stainless Steel

Full specifications and samples available upon request.

## 1 Floor Labels

These can be used to identify storage lanes or areas where products cannot be kept on racking due to weight. We produce highly durable under-surface printed mark-resist plastic labels with high-coat-weight adhesive that adheres really well to warehouse floors. The labels can include variable information such as aisle, row and also colour-codes and graphics to help accuracy of identification.

## Racking Safety Signs

2

Durable plastic signs that include all the statutory warnings, maximum loads etc. They can also include variable information to identify the exact section of racking for regular inspection reports. These must be noticable and display basic SEMA (Storage Equipment Manufacturers Association) requirements as part of racking inspections.

## 3 Hanging Signs

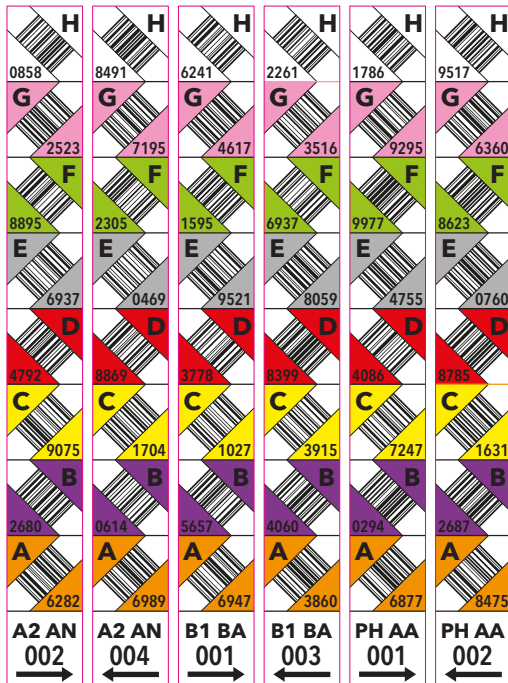

Hanging signs are a popular alternative to floor labels amongst the industry as they are safe from damage once hung. Our rigid plastic signs hang from roof purlins or wires to indicate aisle numbers etc. They can be white, colour-coded or reflective to help with long-range barcode scanning. They are important identification products as they can offer a large scale visual advantage from far distance.

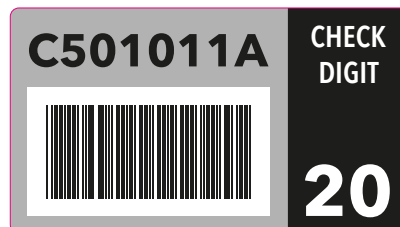

## 4 Racking Labels

Used to help identify pallet locations on racking. Racks with location labelling become efficient storage systems where thousands of pallets can be stored and quickly found again. We are able to produce rack labels with an almost unlimited number of barcode symbologies due to latest software capabilities. Can be applied in average and freezing temperatures with standard-high adhesives. Our Crossbeam labels contain locations check digits arrows and colour-codes to accurately identify crossbeam or shelf locations. Our Upright labels contain multiple locations, check digits, arrows and colour-codes. Barcodes can be oblique to improve read-accuracy.

## 5 Tote Labels

Some storage facilities use plastic bins to store small components that are likely to remain in position for long periods without being tampered with. Several of our warehouse label options are suitably used to identify bins and totes. We produce durable permanent plastic or temporary low-cost paper barcode tote identification labels. The permanent plastic labels have the correct adhesive to adhere well to the tote and can be laminated for extra durability or under-surface printed for ultimate durability. They can be simple black on white or can contain colour coding or full colour logos for brand promotion and asset ownership.

## 6 Asset Labels

There are many uses for asset labelling in the warehouse, including product, equipment, tools racks and machine tracking to minimise loss and keep accounts stable. Asset labels characterise any number of physical assets and display serial numbers or barcodes. They come with high spec adhesives to stick to a range of surfaces and are highly durable, resistant to abrasion and cleaning chemicals.

## In-Plant Printer Labels

7

Our thermal-transfer and direct-thermal labels are used in desk-top & portable printers around the warehouse and distribution environment. The labels can include simple colour-coding through to full colour pre-print. To be used on parcels and pallets at the point of despatch. The correct adhesive is supplied to adhere well to cartons and pallet stretch or shrink-wrap through the distribution chain. Labels are wound correctly to ensure a correct fit with any of the thermal printers used in the despatch environment.

## 8 Pallet & Carton Licenses

Licenses are defined for different types of containers such as pallets, cartons and totes. The pallet becomes its own license plate record with the information about the items inside which can be detected with one single barcode scan. A lot of different information can be associated with a license plate such as: serial number, expiration date, location and more.
