We manufacture event badges for on demand ticket printing. Our event badges can be supplied plain or pre-printed full colour with event logos etc. We have a range of materials to suit different printer applications including direct thermal, thermal transfer and colour injket cards. Usually the finished format is fan-folded in stacks but we can also finish in rolls.

Non-Adhesive Folding Badges (Double-Sided)

Non-adhesive folding badges are an economical option which can be made with or without a lanyard slot. A lanyard slot allows the badge to be eco-friendly by being clipped straight on to a trigger or swivel clip. Badges with no slot can attach to a crocodile clip or slide into a plastic holder. All of our badges can be manufactured in a wide range of materials to suit various printer technologies including thermal transfer, direct thermal and colour inkjet card. The badges are printable in one pass and are then folded in half to make a double-sided badge.

Self-Adhesive Folding Badges

Self-adhesive folding badges are a more expensive option to non- adhesive badges but the presentation is neater as the folded sides close together completely flat. They include a lanyard slot which can be clipped straight on to a trigger or swivel clip. All of our badges can be manufactured in a wide range of materials to suit various printer technologies including thermal transfer, direct thermal and colour inkjet card. The badges are printable in one pass and are then folded in half to make a double-sided badge.

Non-Adhesive Badges (Single-Sided)

Non-adhesive single sided badges are a low cost option in terms of media but they have to slot into a plastic pouch which fixes on with a pin style clip. All of our badges can be manufactured in a wide range of materials to suit various printer technologies including thermal transfer, direct thermal and colour inkjet card. The badges are printable in one pass and are then folded in half to make a double-sided badge.
